

Rex's LED Indicator Tweak Kit

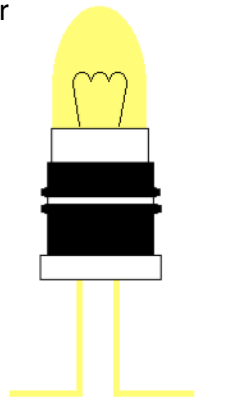

If you have fitted LED indicators and find that all four light up when you select left or right, the problem is most likely the indicator warning lamp.

To fix this problem install Rex's LED 'Tweak' kit.

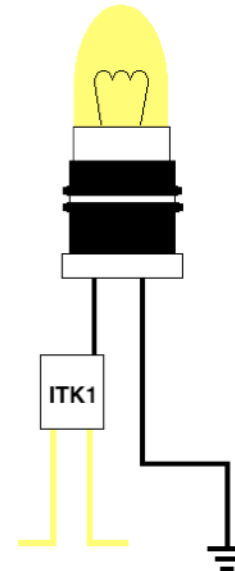

- Locate the indicator warning bulb and gain access to its wiring.
- Unplug the two wires going to the bulb and connect them to the tweak kit as shown.
- Plug the Tweak kit into one of the warning bulb wires.
- Make a connection to earth using the single plain wire, ideally plug in to the wiring loom earth.
- Plug the earth in to the other warning bulb connector

Check the indicators now flash properly
